## IN CASE OF DIFFICULTY

English English/Français/Español POSSIBLE CAUSE & REMEDY PROBLEM/PROBLEME/PROBLEMA Remote-on light does not come on./ . Head unit is not on: Turn the head unit on. Le voyant de télécommande ne s'allume pas. Ground wire is disconnected or defective: Check for continuity with an ohmmeter La lámpara de control remoto no se between PRA-H400's Ground terminal and a known chassis ground point. Battery wire is disconnected or defective: Check for approximately
+ 12 volts between PRA-H400's Battery and Ground terminals. Blown Fuse: Check PRA-H400's 5A Fuse, located near the Battery terminal. If it is blown, replace it with an identical one. If the the wiring connections. If no fault is found, consult your Alpine dealer. Remote-On wire between the head unit and the PRA-H400 is disconnected or defective Check for + 12 volts between PRA-H400's Remote-on connector and ground connector with the head unit on.

## IN CASE OF DIFFICULTY

English/Français/Español	English
PROBLEM/PROBLEME/PROBLEMA	POSSIBLE CAUSE & REMEDY
Remote-On light is on, but no sound is heard from some or all of the speakers./ Le voyant de télécommande est allumé mais aucun son ne sort de certains ou de tous les haut-parleurs./ La lámpara de control remoto se enciende, pero no se oye sonido a través de algunos altavoces o a través de ninguno.	Incorrect Switch Settings: Make sure that all Mode Selector switches are in their correct positions for your system configuration (see WIRING AND SETUP). Defective or disconnected audio cables: check for continuity and replace if necessary. Incorrect Output Level Adjustment: Verify that the PRA-H400's output level controls are not turned very low. If they are, sound output level may be very low and may give the impression that the system (or part of the system) is dead. Defective PRA-H400: Bypass the PRA-H400 by connecting its input and the dead output terminal's cables together (with a pair of Alpine 4402 female-to-female adaptors). If the system becomes functional, the PRA-H400 may be defective. Consult your Alpine dealer. Defective Head Unit, or other audio component: Check each component for wiring and operation.
Alternator whine through the audio system with the engine running./ L'alternateur parasite le système audio quand le moteur est en marche./ El alternador suena a través del sistema de audio con el motor en marcha.	Ground loops: Connect grounds of all audio components to the same point on the vehicle chassis. Verify that this point is a true ground by checking for continuity with an ohmmeter between the ground point and the battery's (—) terminal, and follow the grounding recommendations on the GUIDE FOR INSTALLATION AND CONNECTIONS. Shorted Signal and Chassis Grounds: Check for shorts between speaker leads and chassis ground, or input signal ground and chassis ground. The other audio components may have insufficient filtering: They may need noise suppressors on their battery or ignition connections. Check the vehicle's battery and voltage regulator.

## CONNECTIONS

#### Precautions

- Be sure to disconnect the negative cable from the (-) pole of the battery before connecting your PRA-H400 to avoid short circuits.
- When replacing a blown fuse make sure to replace it with one of the same rate.
- one of the same rate.

  Be sure to connect the colour coded leads correctly according to the diagram. Otherwise malfunctioning of the unit and/or damage to the vehicle may occur.

  Be sure to connect the speaker (–) leads to the speaker (–) terminal. Never connect left and right channel speaker
- cables to each other or to the vehicle body.

  This unit is designed for 12V DC systems with negative pole grounded. Make sure that your vehicle has this type of electrical system before connecting the power cable.
- You must be very careful when connecting wires to the vehicle's electrical system. Be sure you do not use leads of factory installed components (like an on-board computer). When connecting the PRA-H400 to the fuse box, make sure the fuse for the intended circuit of the PRA-H400 has the appropriate amperage. Failure to do so may result in damage to the unit and/or the vehicle. When in doubt, consult your ALPINE dealer.
- ① Ground Lead (Black) Connect this lead to a good chassis ground on the vehicle
- (2) Remote Out Lead (Blue/White) Connect this lead to the Remote-On Lead of your amplifier. Do not connect to the Remote-On Lead of the Head
- 3 Battery Lead (Yellow)
  Connect this lead to the positive (+) post of the vehicle's battery.

You may need an extended lead to connect of the

Battery Extended Lead (Yellow)

## **BASIC SYSTEM**

## THEORY OF OPERATION

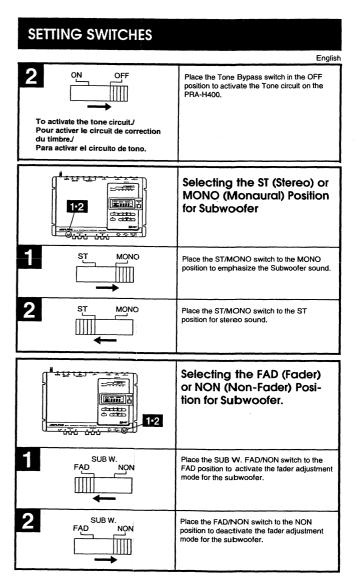

Englis The PRA-H400 is an active crossover SIGNAL PROCESSOR/ Processeur de signal/ PROCESADOR DE SEÑAL network consisting of active components such as op-amps and transistors. These components accomplish the filtering and signal division before amplification, while the signal is still at its pre-amp level. An active dividing network is inserted before the amplifier(s), after all the pre-amp level signal processing is done. This allows running separate amplifiers for each component driver. Therefore, passive filters between the Pre-Amp Level Output/ Sortie au niveau de préamplification/ Salida de nivel de preamplificación ACTIVE DIVIDING NETWORK/ Circuit diviseur de fréquence actif/ RED DIVISORA ACTIVA amp and the speaker components are no amp and the speaker components are no longer necessary. By using separate amplifiers, the drivers are completely isolated from each other. The PRA-H400 has the following advantages compared with passive Pre-Amp Level Outputs/ Sorties au niveau de préamplification Salidas de nivel de preamplificación a. The inefficiency problem of the passive networks is eliminated because there are no longer any additional components (such as inductors, capacitors, or resistors) between the amplifier and the speaker. This ensures POWER AMPS/ puissance/ AMPLIFICADORES DE POTENCIA that all the output of the amplifier is delivere Speaker Level Outputs/ Sorties au niveau des haut-parleurs Salida de nivel de b. No inductors and only a few small capacitors are used in active dividing networks. Terefore, large phase shifts and their associated problems are eliminated. c. Different components of the speaker SPEAKERS/ Haut-parleurs/ ALTAVOCES c. Different components of the speaker system are driven by separate amplifiers. These amplifiers act as isolators and preven any interaction and intermodulation between the different drivers. Tweeters will be safe from high frequency by-products of a clippin d. Level imbalances between different speakers are overcome very easily by adjusting the output level control of each band. Because only the pre-amp input level to amplifier is changed, there is no loss in

#### **SETTING SWITCHES** English **IMPORTANT** Before you start to change the switch positions, be sure to turn off your vehicle's ignition key to protect your A/V system. Selecting the 2-way or -3-way Speaker System COTTO 1.2 MODE Place the MODE 3WAY/2WAY switch to the 3WAY position when your speaker system is a 3-way (using 3 speakers; woofer, mid-3WY MODE Place the 3WAY/2WAY switch to the 2WAY 2WY position when your speaker system is a 2-way (using 2 speakers) system. - 0 × Turning the Tone Bypass On 1.2 or Off Ziii. You can bypass or activate the Tone circuit on the PRA-H400 using the Tone Bypass switch on the PRA-H400. Place the Tone Bypass switch in the ON position to bypass the Tone circuit on the PRA-H400. Since the Tone circuit on the ON OFF Head unit will be automatically bypassed when the PRA-H400 is connected to the Head unit, straight signals from a source unit can be output. Use this position when you Pour contourner le circuit de correction du timbre. Para poner en derivación el circuito play a good quality CD etc. Note: With the Tone Bypass switch placed in the ON position, the Treble and Bass adjustments on the Head unit cannot be made and the display will not show "TREBLE" or "BASS."

When 2 Dividers are connected, place the

Tone Bypass switch on both Dividers in the

e. Advantages related specifically to the PRA-H400 include near-zero phase shift due

to the use of DSP implemented filters. This helps avoid acoustic interference. In addition the PRA-H400 allows adjustment of the time

delay of each channel, making the acoustic alignment of each driver possible.

## **Recalling the Preset Settings** Press the A. PROC button on the Head unit to display the desired mode, "X-OV" (Crossover) or "T-CORR." (Time Correction). (If you A.PROC A. SOURCE select the A. SOURCE mode, the PRA-H400 T-CR. T. CORR. vill be turned off.) 2 Press the Preset button that has your desir settings on the Head unit, or the ▲ or ▼ button on the Remote Controller until your desired Preset Number appears. ≥ 2 PRESET-2 The display shows the selected Preset 3 Press the A. PROC button on the Head unit A.PROC A. SOURCE or Remote Controller until the display shows A. SOURCE" to deactivate the PRA-H400.

#### Selecting the Master or Slave Divider **E**iii. You can use 2 PRA-H400 Dividers (Master 0 000 and Slave units). Turn the vehicle's ignition key off while 000 000 witching the CONFIG. M/S switch. Switch Setting Connect 2 Dividers following the Connection CONFIG CONFIG Manual provided. Place the CONFIG. M/S (Master/Slave) switch on the Master Divider's rear panel to the "M" position and the M/S switch on the Slave unit to the "S" position. For the Slave For the Maste unit./ Appareil asser Para la unidad Operation MASTER Press the A. PROC button on the Head unit or Remote Controller for at least 2 seconds to switch between the Master and Slave SLAVE positions. The Display on the Head unit shows the selected divider 3 Press the MODE button on the Head unit to MODE select the Audio Selection mode. When only 1 divider is connected, each pressing changes the display on the Head unit as follows TRE-BAS-BAL-FAD-VOL-TRE When 2 dividers are connected, the display on the Head unit changes as follows: TRE-1→TRE-2→BAS-1→BAS-2→ BAI → FAD→ VOI → TRE-1 Press the A. PROC button on the A.PROC Head unit or Remote Controller to select the Crossover or Time Correc-T-CORR. tion mode on the Master or Slave A. SOURCE Divider(s) will be deactivated Note : The EFFECT and DEFEAT X-OV. buttons are inoperable

## ADJUSTMENTS/REGLAGES/AJUSTES

English/Français/Español

#### GENERAL REQUIREMENTS:

The Alpine PRA-H400 is a very precise and versatile piece of equipment. It should be adjusted by an autosound specialist who possesses the knowledge and the tools to accomplish this task accurately. It would be helpful to use a Real Time Analyzer (such as Alpine 4780), but it is not absolutely necessary.

 It is imperative to have easy access to the PRA-H400 while it is being adjusted. If it is to be mounted permanently in a location which will not allow easy access, it will be necessary to temporarily relocate the unit by using long audio and power extension wires.

 Before any adjustments can be made, all stereo system components (except for the PRA-H400) must be permanently mounted in their locations, and the passenger compartment should be completely reassembled, as removed door panels or seats will affect the frequency response of the vehicle's interior.

- The vehicle's doors should be closed and windows rolled up. This may require temporary relocation of the PRA-H400 outside the vehicle's passenger compartment (if it is to be permanently mounted there) using long extension wires.
- The trunk can be left open if the passenger compartment, including all the speakers and speaker enclosures, are sealed off from the trunk
- Check the component speakers' specifications for their rated frequency response. The

active crossover frequencies used for each speaker must fall within its frequency response. For example, a mid-bass woofer rated from 60 Hz to 300 Hz must not be driven with frequencies lower than 60 Hz or higher than 300 Hz. Otherwise, the sound quality will be severely degraded and speaker damage may also result. Therefore, tentatively adjust the PRA-H400 crossover points not to exceed the frequency response of the drivers and remember to stay within these boundaries during the adjustment procedure.

## ADJUSTMENTS USING RTA (REAL TIME ANALYZER)/REGLAGE AVEC RTA (ANALYSEUR EN TEMPS REEL)/AJUSTES UTILIZANDO UN RTA (ANALIZADOR DE TIEMPO REAL)

English/Français/Español

#### Requirements and Setup:

 The RTA (Real Time Analyzer) should cover at least 20 Hz to 20 kHz in at least one-octave increments. It should also possess the ability to analyze and display frequency response at 100 dB or more Sound Pressure Level (SPI).

As there are many different makes and models of Real Time Analyzers, it would be impractical to define set-up procedures for a specific unit. Therefore, you will need to familiarize yourself with the particular model of RTA you will be using to adjust the PRA-H400. The RTA's owner's manual can provide all the necessary information.

- A high quality, calibrated microphone should be used with the RTA. The RTA manufacturer can recommend a suitable model. This microphone should have a very flat response throughout the audio bandwidth (20 Hz to 20 K Hz).
- It will be most convenient to have the PRA-H400 as close as possible to the RTA during adjustments as it is easier to

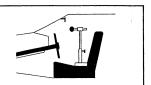

monitor the changes made by each control.

NOTE: RTA adjustments must be done in quiet surroundings. Noise from wind, traffic, or other car stereo systems will affect the RTA readings and throw off the adjustments

After all the general requirements are met, proceed as follows:

 Position the microphone on a microphone stand placed on the driver's seat, in the same position and height as the right ear of the driver when the driver's seat is located at the left side of the vehicle (if the driver's seat is located at the right side, place the microphone in the same position and height as the left ear of the driver).

Connect the microphone to the RTA. Set the controls for non-weighting and greater than 100 dB range.

Turn the sound system on, verify that all components are functional, and place all controls such as Bass, Treble, Fader, Balance, in-dash equalizer controls (if any) and Remote Subwoofer Level Control (if used) to the centre/flat (neutral) position. Also verify that the Input Mode Switch, Subwoofer Fading Mode Switch, Subwoofer Stereo/Mono Switch, and Front and Rear Crossover Mode Switches are set as needed.

# ADJUSTMENTS USING RTA (REAL TIME ANALYZER)/REGLAGE AVEC RTA (ANALYSEUR EN TEMPS REEL)/AJUSTES UTILIZANDO UN RTA (ANALIZADOR DE TIEMPO REAL)

While observing the RTA screen, adjust

the output level control to properly shape and smooth out the level differences.

doors and windows, and repeat steps 5

12. The Subwoofer output, CH 1/2 High or

CH 3/4 High output (or any other output) level can now be increased or decreased for

customer preferences such as more low bass

13. Using a high quality music source, carefully evaluate the sound and perform any

additional adjustments as necessary.

than the midrange speaker.

sure that the rear drivers are defeated.

2. Using a test CD or tape such as the Alpine Official Reference Software, select the "Pink Noise" track and set the volume control of the system for a nominal 100 dB average sound pressure level.

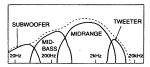

Perform the following steps with all doors closed, windows rolled up, and the vehicle interior completely intact:

3. This sound level will give you a display on the RTA screen. This display is the frequency response of the total system (the sound system and the vehicle's interior together). It may look somewhat similar to the one shown below:

Due to different component speaker efficiencies, power amplifier sensitivity, vehicle interior resonances, speaker and speaker enclosure non-linearities or interior audio section frequency response, an unadjuste system may have many peaks and dips in its

The PRA-H400 can be adjusted to balance the acoustical response and reduce other non-linearities.

Certain frequency regions can also be boosted or cut to overcome road noise or to accommodate listener preferences.

6. Find out which speaker's output is the lowest compared to the other bands. This will he the Reference for all other hands. In the example shown above, the SUBWOOFER output is the lowest. Therefore, the MID-BASS, MID-RANGE and

8. Adjust and fine-tune the crossover points for each region to further smooth out the

9. If your head unit has a single pre-amp output only, skip to item 12.

10. Fade to the rear, check for defeated front speakers, close all vehicle doors and

11. Re-centre the fader control, verify that all

Note: It is almost always necessary to dial-in additional sub-bass boost in order to overcome road noise which increases with the vehicle's speed. If using the Alpine Remote Subwoofer Level Control, adjustment in a stationary car is sufficient. The bass output can be increased or reduced by the user. Furthermore the original setting can also be restored by returning the control to its centre

14. If the Remote Subwoofer Level Control was not installed, it will be necessary to ive the car, listen, and set the PRA-H400's Subwoofer level control to a compromised value between the optimum setting for stationary and freeway speed

# English/Français/Español

To adjust the PRA-H400 without using an RTA, the PRA-H400 should be temporarily moved to the driver's seat vicinity using long extension cables, and the adjustment should be done with the installer in the driver's seat.

2. A high quality source material (music) with excellent sound quality and frequency response must be used.

ADJUSTMENTS WITHOUT RTA (REAL TIME ANALYZER)/REGLAGE SANS RTA

(ANALYSEUR EN TEMPS REEL)/AJUSTES SIN UN RTA (ANALIZADOR DE TIEMPO REAL)

Turn the sound system on, verify that all components are functional, and place all controls such as Bass, Treble, Fader, Balance, in-dash equalizer controls (if any) and the Remote Subwoofer Level Control (if used) to

the centre/flat (neutral) position. Also verify that the Input Mode Switch, Subwoofer Fading Mode Switch, Subwoofer Stereo/Mono Switch, and CH 1/2 and CH 3/4 Crossover Mode Switches are set as needed.

English/Français/Español

Perform the following steps while seated in the driver's seat, with all doors, windows and trunk closed, and the vehicle interior completely interest.

If you are using a head unit with separate front and rear pre-outs, verify that the 2-Input mode is selected, and fade to the front. Make sure that the rear drivers are defeated.

10. If your head unit has a single pre-amp output only, skip to item 13.

11. Fade to the rear, check for defeated front speakers, close all vehicle doors and windows, and repeat steps 5 through 9.

12. Re-centre the fader control, verify that all speakers are functional, close all the vehicle doors and windows, and repeat steps 5 through 9.

13. The Subwoofer output, CH 1/2 High or CH 3/4 High output (or any other output) level can now be increased or decreased for listener preferences such as more low bass or more emphasized highs.

5. Listen carefully and try to find output level imbalance between the different component

6. If such an imbalance exists, determine which output level is the lowest.

Try to keep the output level for that band (or bands) at 0 dB if possible.

8. Cut the other bands, as necessary, to balance the

9. Adjust and fine-tune the crossover points for each region for the most smooth and pleasant sound.

carefully evaluate the sound and perform any additional adjustments as necessary.

14. Using a high quality music source,

**Note:** It is almost always necessary to dial-in additional sub-bass boost in order to overcome road noise which increases with the vehicle's speed. If using the Alpine Remote Subwoofer Level Control, adjustment in a stationary car is sufficient. The bass output can be increased or reduced by the user. Furthermore, the original setting can also be restored by returning the control to its centre

15. If the Remote Subwoofer Level Control was not installed, it will be necessary to test-drive the car, listen, and set the PRA-H400's Subwoofer level control to a

compromised value between the optimum

setting for stationary and freeway speed

On the Control Unit 4381 When performing adjustment of PRA-H400 in the Alpine dealers, a dedicated control unit of

4381 will be used. In this case, connect the 4381 to the Remote Control Unit Connector

## TIME CORRECTION ADJUSTMENT:

The time correction function in PRA-H400 is provided to adjust sound timing reading from each speaker to listeners inside the car. The adjustment will be made for each speaker in a step of 0.3 mS. Very natural sound image with a good feeling of the sound location will be obtained by adjusting the time correction to the seat position.

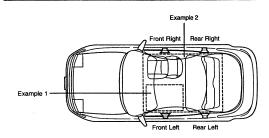

Adjust the time correction level of the front left speaker to a high value and the rear right to zero or a low value. (See the illustration on

Example 1. Listening Position: Front Left

Example 2. Listening Position: All Seats Adjust the time correction level of each speaker to almost the same level. (See the illustration on next page)

## 本機の特長

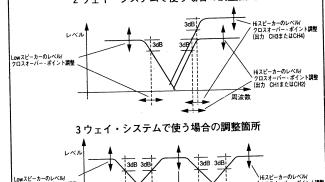

本機は、パワー・アンプで増幅される前の信号処理が可能なアクティブ・ディバイディング・ネットワークです。そのため、スピーカーとアンプの間に置かれたパッシブ・ネットワークは不要となり、各アンプは完全に独立した動作が可能となり、干渉問題が無くなります。さらに、スピーカー間のレベル調整、時間補正を行うことができ、車室空間に最も適した音響空間を作り出すことができます。

## クロスオーバー・ネットワークについて

各スピーカー・ユニットの再生周波数別に音楽信号を分割、専用アンブで増幅、専用スピー カーで再生します。そのため伝送過程における各帯域の相互干渉が根本から排除され、アンブ 以降の流れに混変調歪の発生を抑制します。

\*・・・・音楽信号の分割点をクロスオーバー・ポイントと言います。

## 2 ウェイ・システムで使う場合の調整箇所

#### 時間補正について

車室という特殊な条件であるために、リスニング・ポジションとスピーカーの距離に大きなば らつきがあります。そのため音が耳に到達するまでに時間差が生じ、音像定位が悪くなった り、周波数特性が悪化したりします。そこで、時間補正を行いスピーカーに適切なタイミング で信号を送ることにより、リスニング・ポジションでの時間差を取り除きます。

Midスピーカーのレベル/ クロスオーバー・ポイント調整 (Mid Low Mid Hi)

#### ●時間補正の算出方法

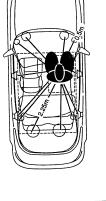

- 1.リスニング・ポジション (運転席など) に座り、頭の位置と各スピーカーの距離 (m) を 測定します。
- 2. 一番遠いスピーカーの距離とその他のスピーカーの距離の差を算出します。 L=(一番遠いスピーカーの距離) – (それぞれのスピーカーの距離)
- 3、スピーカーごとに算出した距離を音速(350m/sec)で割ります。その値が各スピーカーの 時間補正値となります。
- 値の入力方法は、16、17ページを参照してください。 時間補正値 (msec) = L÷350×1000 この値を、スピーカーの数だけ算出します。

#### ●具体例

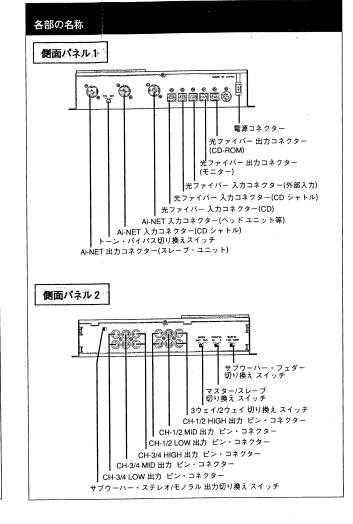

- 右イラストのフロント右側ツィーターの 時間補正値を算出する。
- 〈条件〉
- 一番遠いスピーカーの距離 ......2.25m (たとえば、左側リア・スピーカー)
- フロント右側ツィーターの距離 ...... 0.5 m 〈算出〉
- L =2.25m-0.5m=1.75m

補正時間= 1.75/350 ×1000=5 (msec)

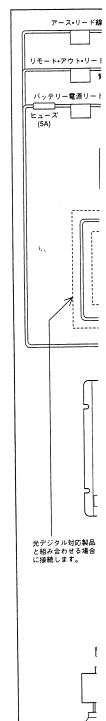

フロント右側ツィーターの時間補正値 ..... 5 (msec)に近い値に設定します。 (例:この場合、5.1mSにします。)

本機は多くの機能をもっていますので、正確な調整が必要になります。

再調整がしにくい所に設置する場合は、あらかじめ調整しやすいように、長いケーブルを使用 することをおすすめします。

調整をする前に、本機以外のコンポーネントはすべて設置をすませ、設置のため取り外したド アやシートは、車内の音響効果に影響が出るため、必ず元通りに組み立てておいてください。

- 車室内にすべてのスピーカーやスピーカー・エンクロジャーが設置されていて、トランクと 車室の間がシールされているときには、トランクは開けたままにしておいてもかまいませ
- スピーカーの規格から再生周波数帯域をチェックしてください。アクティブ・クロスオー バー周波数は、それぞれのスピーカーの帯域の範囲内に入っていなければなりません。例え ば、60Hz~300Hzの再生周波数帯域を持つミッドバス・ウーハーは60Hz以上300Hz以下の周 波数で再生しなければなりません。範囲外ですと音質が劣化し、スピーカーに障害が起こる こともあります。
- そのため、本機のクロスオーバー・ポイントの調整時にはスピーカーの周波数範囲を超えな いように作業してください。
- 各スピーカーとリスニング・ポジションの距離を計り、時間補正値を算出してください。 (5ページをご覧ください。)

#### 調整のフローチャート

本機の取り付け/接続/切り換えスイッチの設定作業がすべて完了してから次の作業に入ってくだ

各スピーカーの再生周波数帯域の把握と、時間補正値の算出を行います。 2 システムの電源を入れます。

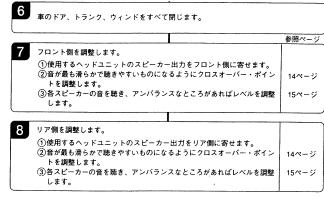

3 SET UPボタンを押し、本機を調整可能状態にします。

4 周波数特性の良いソース(CDなど)を選択します。

**5**7 バス、トレブル、フェダー、バランスのコントロールをフラットにします。

#### 操作を始める前に(準備)

データを記憶させます。

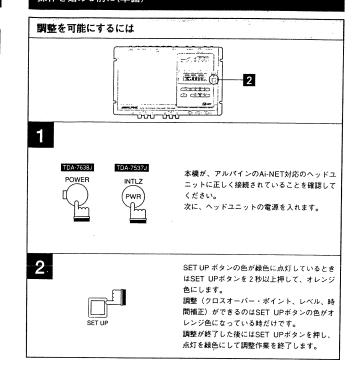

9 フロント/リアのバランスをとります。 ①使用するヘッドユニットのスピーカー出力を中央に戻します。 ②音が最も滑らかで聴きやすいものになるように、クロスオーバー・ポイ 14ページ ③各スピーカーの音を聴き、アンバランスなところがあればレベルを調整 15ページ ④各スピーカーごとに、算出した時間補正値を入力します。

11 SET UPボタンを押し、本機をロック状態にします。 13ページ

#### 操作を始める前に(準備)

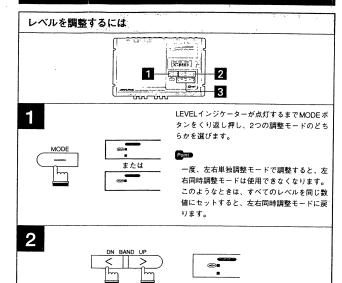

## 本機からの操作

18ページ

3をくり返します。

## 本機からの操作

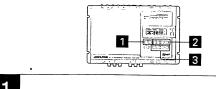

BAND DNまたは UPボタンをくり返し押し、調整したい周波数帯域を選びます。

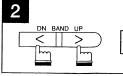

## 2 ウェイ・スピーカー・システムの時間補正をするには

時間補正モードで、各スピーカーから出る音の時間差を調整します。 則面パネルのMODEスイッチが、2ウェイにセットされていることを確認してください。 Point 時間補正は、ヘッドユニットまたはリモコンでも行うことができます。

BAND DN またはUPボタンをくり返し押して、 合わせたいチャンネルと周波数帯域(LOW MID, HIGH) を選びます。

本機からの

3

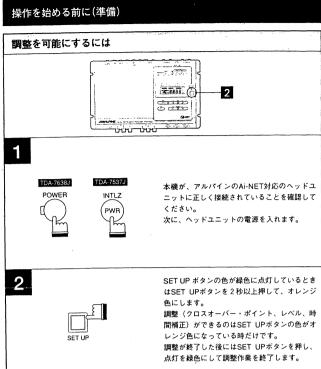

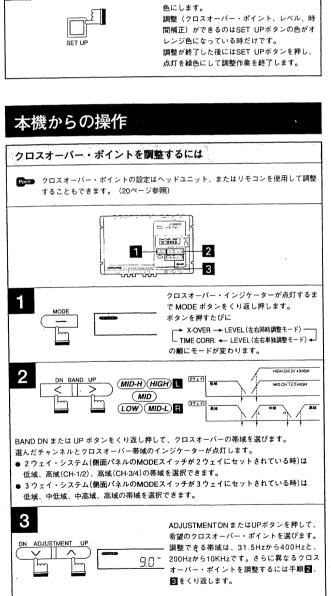

3ウェイ・ス 側面パネルのMODE

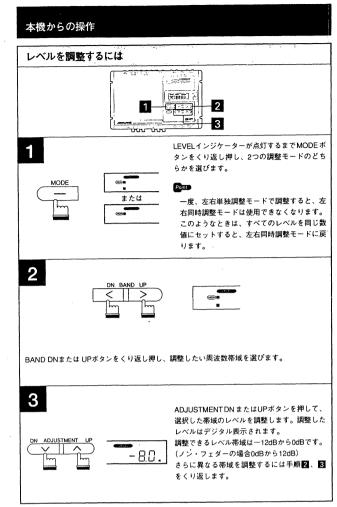

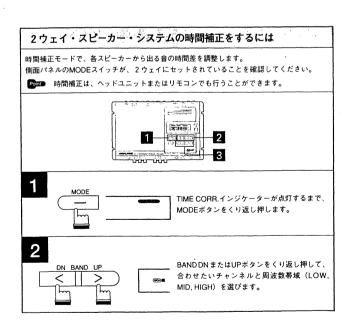

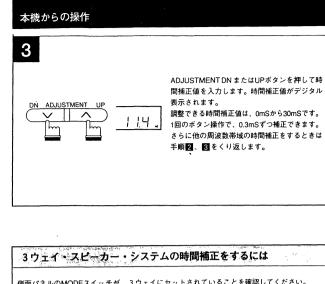

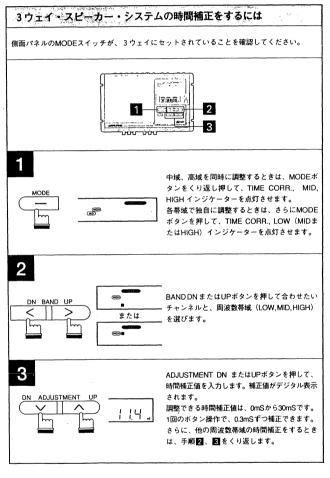

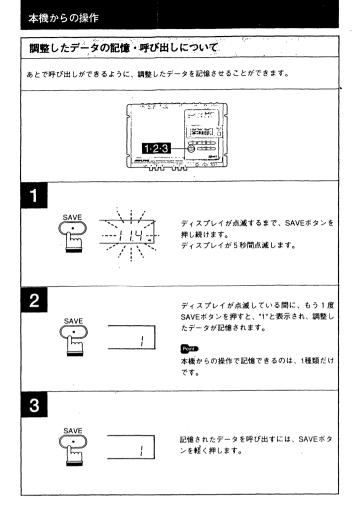

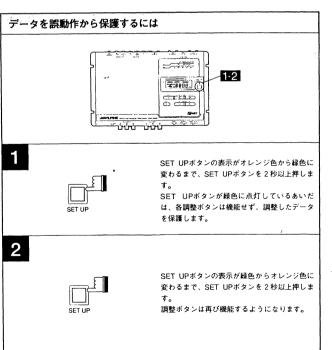

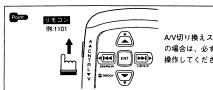

## ヘッドユニット/リモコンからの操作

A/V切り換えスイッチ付きのリモコンをお使い の場合は、必ず "A" の位置に切り換えてから、 操作してください。

#### クロスオーバー・ポイントとレベルの調整について

アルパインのヘッドユニット(H/U:例えばTDA-7638J, TDA-7537J一近日発売予定一)やり モコン(例えば1101)を使っても、Ai-NET機能で本機を操作することができます。

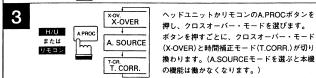

TOA-7638J

TOA-7638J

TAF

X-OV. ON

し、クロスオーバー調整モードにします。
ディスプレイにX-OV. ONとT-CR. が表示され、その後T-CR. のみになります。

リモコン

X-OV. リモコンのENTボタンを押して、調整可能モードにします。ディスプレイにはチャンネルと周波数を数秒間、表示します。表示している間に、次の操作を行います。

5 UHI リモコンのBAND/PROGボタンを押し、調整する帯域を選びます。

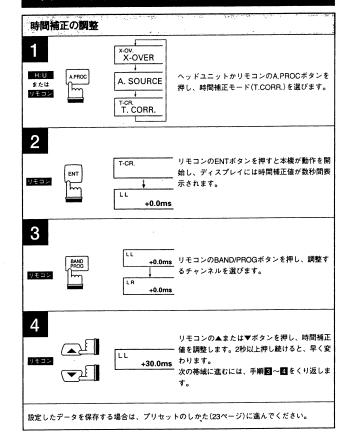

リモコンの▲または▼ボタンを押し、レベルを 調整します。 2 秒以上押し続けるとレベルが早 く変わります。 -5.0dB す。

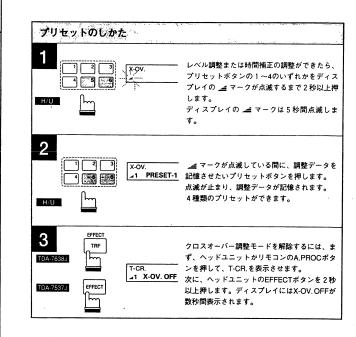

8

① さらに、時間補正の調整をする場合 □ 「時間補正の調整(22ページ)」に進んでください。

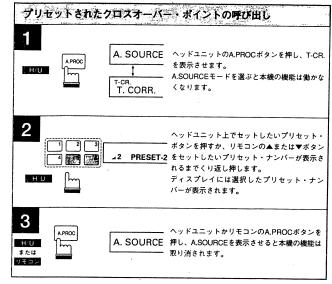

② このまま、プリセットする場合 ⇔ 「プリセットのしかた(23ページ)」に進んでください。

#### ヘッドユニット/リモコンからの操作

#### [Measuring Conditions]

Power Supply Voltage : DC14.4V
 Measuring Meter : Digital Multi Meter
 Measuring Point Reference : Between Ground (Connect the Head Unit)
 No Signal Input

NOTES:
1. All resistance values are in ohms. K= 1,000
2. All capacitance values are in microfarads. P= 1/1,000,000

# **Electrical Parts List**

Resistor : Carbon resistors under 1 / 4 watts are not mentioned in the parts list, please confirm them by schematic diagram.

Capacitor: µF=microfarads, pF=picofarads
